

TX12E-4C-OP Custom Remote for Opacmare Passarelle

The Story:

These **-OP** custom remotes came about as a result of a customer enquiry for a compatible solution for his water damaged remote. After working long distance with the customer, and after receiving his damaged remote for analysis, we set about creating a solution for him. Our solution proved successful and he, together with many subsequent customers, have enjoyed the fruits of this collaborative effort.

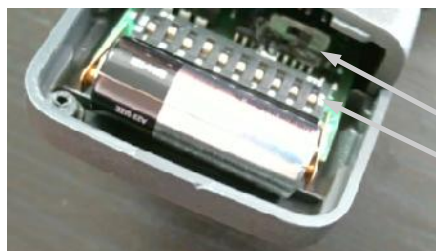

Later on, it was discovered there were TWO versions of the “same looking” original remotes, so we now offer a remote which is compatible with two versions of the similar looking remote.

We have incorporated a miniature slide switch for the user to select a compatibility mode of operation for their particular system version.

Simple Setup:

- Set the 10 position DIP switches to the same settings as per the original remote. If the original remote is lost, then the settings may be found in the receiver's control box.
- Test functionality. If only partial functionality is achieved, then change the position of the Slide Switch and retest.

NOTE: Before ordering a remote, it is important for you to confirm that the original remote at least similar in appearance to the TX12E-4C-OP compatible remote and that there are indeed DIP switches present in the original remote (just above the battery). If it does not “look” similar then it is unlikely that you will have success and are therefore advised against placing order: TX12E-4C-OP sales are final and non-refundable.
